

Please DO NOT APPROVE CELL PHONE USE ONBOARD COMMERCIAL JETS. There is no clear evidence that they do not interfere w/ navigational equipment. More importantly, they could be used by potential terrorists to communicate w/ one another. Also, people will be on their phones unable to hear safety announcements from pilots/attendants. Psgrs. do not need another irritant in a close environment to cause friction for the attendants to deal with..tension on board can be intense as things are. Thank you.
